(a) Extra cost to make each output valid
MST (full model)
Ablation: without hard admissibility
Ablation: without infeasibility reporting
Ablation: without exact search (Dynamic Greedy-MST)
Baseline: minimal sufficient subset
Baseline: parsimonious top-3
Ablation: without sufficiency threshold
Baseline: greedy submodular cover
Ablation: without disclosure-cost objective
Baseline: budgeted coverage
Baseline: policy filter only
Baseline: full disclosure
